

State Government & Health Plans

## Improve your Quality Performance with STARSTrack

### Our Healthcare Solutions Principles

- Single version of the truth
- Single quality measures platform
- Integrated analytics (Quality vs Cost)
- Reports designed with the action in mind
- BYOA™ – Build Your Own Analytics (self-service)
- Simplicity / User Experience
- Integration capable (extensibility)
- Scalability

### Integrate STARSTrack with other applications

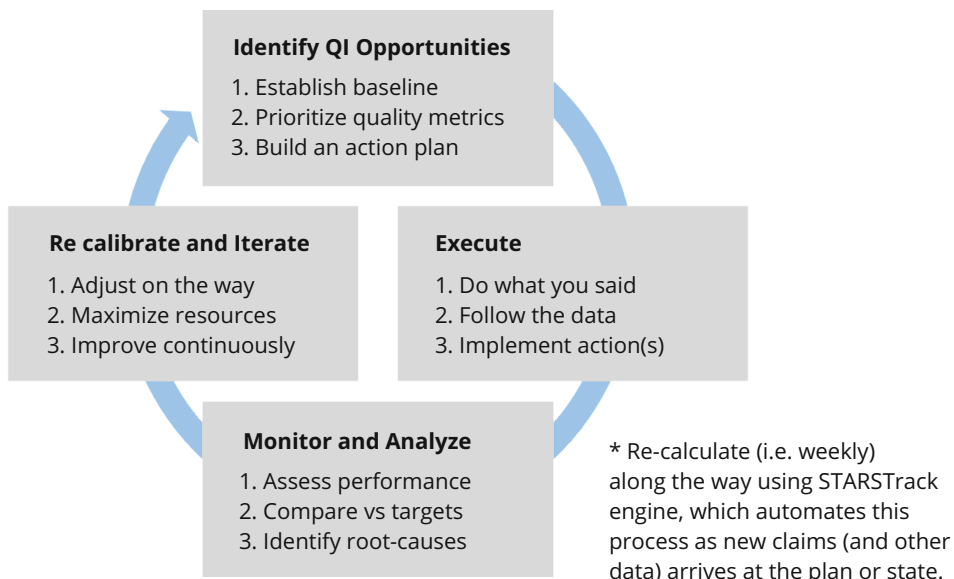

STARSTrack is an NCQA certified solution built to satisfy the needs of State agencies or Health Plans of having the necessary visibility, agility, and up-to-date monitoring of measures, through reporting and analytics, to improve Quality performance across the following areas:

- Medicare (CMS's Five Stars Rating Program)
- Medicaid
- Commercial

It was designed to grow and be flexible enough to adapt to the constant changing needs of the plan, taking into account market and government regulations.

### Iterative Process: Plan, Execute & Monitor

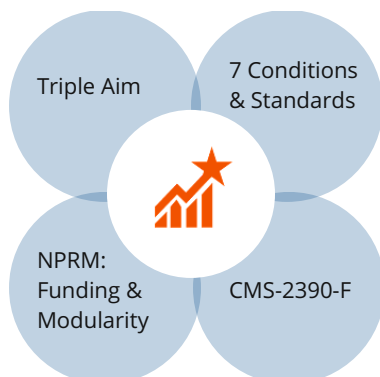

## How can STARTrack help alleviate the recurring data management processes?

- **Ensure reliability in the quality rating and measure results (NCQA Certified)**
- **Agility to the State or healthcare organization:**
  - automate the measure calculation process minimizing human intervention to avoid possible errors in the process
  - refocus your human resources to do more analysis and not data collection, preparation, and manipulation, therefore significant increase in productivity
  - configure the desired frequency for rating calculation
  - obtain rating results with the speed, frequency, and agility to make corrections on time in the course of action or re-affirm the direction or strategy
  - avoid the heavy burden (time and cost) of maintaining the constant changes in measures that CMS/NCQA/PQA/AHRQ and other data stewards publish every year

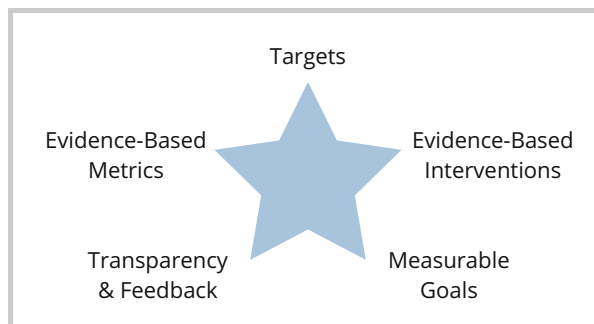

## Compliance benefits of STARTrack

## Key Functionalities to Help Improve Quality Performance

- Continuous performance monitoring by measure, member, and provider
- Statistics on statewide gaps in care by disease state. This can be delivered through daily action-based reports, including actions necessary for adhering to member compliance and better population health management
- MCO, Member, and Provider Performance Monitoring (i.e. Provider Quality Rating Algorithm)
- Develop P4P, Value-based purchasing or Alternate Payment Method agreements with ease
- Quality performance monitoring for states' special populations such as, Behavioral Health, Developmental Disabilities, and Long-Term Services and Support
- Configurable quality rating system (CMS-2390-F) to meet the State's requirements
- APCD (All-Payer Claims Database) integration and decision support capabilities
- MCO quality measures versus Department Policy, Regulations, and State law
- Provider cost and over utilization versus quality
- Build *What-If* scenarios to plan and forecast potential quality performance
- Flexibility: custom measures, custom cut-points, and custom reports

## Compliant with the Five Key Components for Quality Analytics Funding from CMS
